

6.4.1 Water Reuse Policy

2023–2024

The Arab Academy for Science, Technology, and Maritime Transport (AASTMT) has developed a detailed Water Conservation Policy in response to Egypt's severe water scarcity challenges. This policy outlines numerous initiatives to reduce potable water consumption and promote sustainable practices. Key measures include utilizing on-campus water sources like creeks and wells for irrigation, installing water-saving devices, and implementing leak detection technology in new buildings. AASTMT also focuses on educating students and staff on water conservation and updating facilities to more efficient equipment. Through collaboration with local authorities and outreach programs, AASTMT actively contributes to the United Nations Sustainable Development Goal #6, fostering a culture of responsibility towards water conservation and sustainable management
