## Production and Evaluation Crackers And Instant Noodles Supplement With Spirulina Algae

The study explores the use of spirulina algae in the production of crackers and instant noodles. Spirulina, a blue-green algae rich in protein, vitamins, phytoepigamates, antioxidants, and minerals, was found to increase protein ratio, ash content, and improve physical and cooking properties. The addition of 20% spirulina algae had lower scores for most properties compared to other tested products. This suggests spirulina algae could be used to improve nutritional status in children's food [Production and evaluation crackers and instant noodles supplement with spirulina algae.](#)

#### ABSTRACT

In this study, spirulina algae which is one of the blue-green algae rich in protein 61.50%, and high content of amino acids isoleucine and treptophan (6.77 and 1.93% of protine). Also, agood source of vitamins especially vitamin B complex such as vitamin B12 (193 µg / 100 g) and folic acid (9.66 mg/100 g), many phytoepigamates such as chlorophyll, phycocyanins, total carotene (1.470, 14.17 and 0.550%) and those considered as potent antioxidants. As well as minerals such as potassium, calcium, phosphorus and iron (2180.79, 1042.925, 1899.71 and 336.965 mg / 100 g, respectively). In addition to a high of natural fibers. Spirulina was used in the production of crackers and instant noodles by at 5, 10, 15 and 20%. Data of sensory evaluation results showed that the adding spirulina algae by ratio 20% had lower score for most properties compared to other tested. The chemical analysis, sensory evaluation, physical and cooking properties, rheological properties were done. The obtained data showed that the adding spirulina algae play a large role in increasing protein ratio and ash content and improved the physical properties of the crackers and cooking properties of instant noodles. Therefore it could be produced for industrial level to improve the nutritional status of these products for consumed among children.

**Key words:** Spirulina, crackers, instant noodles, chemical composition, cooking properties and rheological properties.

#### Introduction

## Al Amal

An agricultural consulting office, diagnosing the diseased condition of the plant, giving the appropriate pesticide or fertilizer, and following up the crop from the beginning of planting until harvest to increase productivity and make maximum use of the largest amount of the crop and sell seeds governorate

### Educational Programs

AASTMT provides educational programs to enhance society knowledge and teach students that sustainable ecosystems and land conservation are essential for human health and safety.

[AASTMT Environmental Policy](#) on the AASTMT news page

Committee). The SDGs workforce committee will cooperate with all campuses and deaneries to ensure the satisfactory implementation of SDG13,14, and 15 awareness and recommend initiatives for all stakeholders and funds for their research teams to serve SDGs 13,14 and 15. In addition, the policy will be reviewed frequently, besides reevaluating the action plans and student involvement percentages as required to ensure the most educational and social returns.

### 5 POLICY STATEMENT

AASTMT is committed to achieving the UN 2030 Agenda and taking urgent actions to combat climate change and its impacts and preserve the life below water. AASTMT provides educational programs and initiatives to enhance society's knowledge about climate change and its consequent effects on human health, biodiversity, water resources, and agriculture. We raise a flag warning among our community that climate change symptoms are increasing rapidly, accelerating the intensity of extreme weather events such as heatwaves, droughts, floods, and tropical cyclones. This is causing aggravating water management problems, reducing agricultural production and food security, increasing health risks, damaging critical infrastructure, and interrupting the provision of essential services such as water and sanitation, education, energy, and transport.

acidification; regulate harvesting, and end overfishing, illegal, unreported, and unregulated fishing, and destructive fishing practices.

AASTMT is ambitious to involve our students and the community in protecting, restoring, and promoting all land-based ecosystems and biodiversity. We teach our students that sustainable ecosystems are essential for human health through safe water supplies, sustainable food systems, crops, pollinators, soil, medicines, and climate change mitigation. We hold events to emphasize the importance of terrestrial ecosystems to provide a series of goods, raw materials for construction and energy, food, the capture of carbon, maintenance of soil quality, provision of habitat for biodiversity, maintenance of water quality, as well as regulation of water flow and erosion control.

## Smart Autonomous IoT Agricultural Monitoring System - 2020

This project involves implementing the latest sensing and IoT technologies and machine to machine communications in agriculture practices. Currently, seamless integration of wireless sensors and the IoT in smart agriculture can raise agriculture to levels which were previously unimaginable. CISCO, provides a cloud-based software platform for the IoT in Agri-business, which is rapidly embracing IoT services to capitalize on automation, real-time visibility and remote diagnostics to achieve smart agriculture. Products like Topcon, Motech, Observant and Semios are the best examples that bring the power of communications, sensor technology and cloud computing to the agriculture industry to enhance productivity and efficiency.

## Arab Academy For Science, Technology And Maritime Transport (AASTMT) Participates In A Research Project Against Marine Litter Led By The University Of Rostock And Leibniz Institute For Baltic Sea Research Warnemünde.

In August 2021, the University of Rostock and the Leibniz Institute for Baltic Sea Research Warnemünde (IOW), together with the Arab Academy for Science, Technology and Maritime Transport (AASTMT) and other partners including think tanks as well as universities and ministries from the project region, started a research project on Marine Litter caused by the tourism industry in Egypt, Morocco, Tunisia and Algeria called TouMaLi. Arab Academy for Science, Technology and Maritime Transport (AASTMT) participate in this research as the local project partner in Egypt. Complimentary the Egyptian Ministries for Environment, Local development and Tourism are involved. The project aims to develop and establish sustainable waste management solutions in the tourism sector to protect marine ecosystems in the Middle East and North African (MENA) region. The German Federal Ministry for the Environment, Nature Conservation and Nuclear Safety (BMU) is funding the project with about 4.2 million euros from the "Funding Programme against Marine Litter". "Zukunft – Umwelt – Gesellschaft (ZUG) gGmbH" supports the Federal Ministry in implementing its funding policy aims.

## AASTMT's Recycling Policy

### 1. Introduction:

This Waste and recycling policy shapes part of the AAST's manageability structure and helps uphold the University's Environmental Change and Social Duty Policy:

The policy's point is to lessen negative natural effects emerging from our age of waste raisings, looking to forestall, reuse, repurpose and decrease squander from our activity. The Policy likewise plans to guarantee that AASTMT oversees squander issues as per the counteraction of contamination and consistence with natural enactment consistently.

AASTMT has a vigorous and complete reusing foundation and all staff and understudies are urged to utilize these offices to help reuse as much waste with no guarantees conceivable.

### 2. Policy:

AASTMT committed Policy likewise incorporates the need to think about finish of life removal costs and natural effect when settling on acquirement choices including the development of
