

observership program

Nile of Hope is the first hospital specialized in pediatric congenital anomalies surgeries in Egypt and Africa, Based on the latest scientific research, and the provision of integrated healthcare for children free of charge.

Nile of Hope is not only a hospital but also a scientific training center where Nile of Hope academy was established. The academy is specialized in the rehabilitation of medical and administrative cadres at several levels, especially in the field of congenital anomalies.

Nile of hope Hospital as educational institute can provide academic and clinical trainings in the form of hands-on experience for specialists or elective courses and observerships for undergraduates. Additionally, Nile of Hope Academy can offer Research courses with the required international standards and accredited certifications.

The Academy is always keen on establishing national and international collaborations with Academic Institutes as part of the essential process of sustainable development.

The academy is interested in continuous development, so Nile of Hope Academy decided to organize this summer observership for medical students.

Summer observership program:

- 1- The duration of the summer observership program is 24 hours throughout 7 days.
- 2- The trainee will submit to the academy a reflection report on what he/she learned during the training period at the end of the observership.
- 3- Each trainee will receive his/her log book during the observership, and it will include an evaluation from the supervisor.
- 4- Each trainee will submit his/her reflection report and log book at the end of the observership in order to receive an accredited certificate from Nile of Hope Hospital and Academy.
