Arab Academy for Science and Technology & Maritime Transport

College of Computing and Information Technology, Cairo

Department of Information Systems

Bachelor of Science in Information SystemsProgram Specification

(Year 2013- 2014)

A. Basic Information

- 1. Program title: Bachelor of Science in Information Systems
- 2. Program type: Single
- 3. Department responsible for the program: Information Systems
- 4. Date of program approval: 2007

B. Professional Information

Information systems specialists focus on integrating information technology solutions and business processes to meet the information needs of businesses and other enterprises, enabling them to achieve their objectives in an effective and efficient way. This discipline's perspective on information technology emphasizes information, and views technology as an instrument for generating, processing, and distributing information. Professionals in the discipline are primarily concerned with the information that computer systems can provide to aid an enterprise in defining and achieving its goals, and the processes that an enterprise can implement or improve using information technology. They must understand both technical and organizational factors, and they must be able to help an organization determine how information and technology-enabled business processes can provide a competitive advantage.

The information systems specialist plays a key role in determining the requirements for an organization's information systems and is active in their specification, design, and implementation. As a result, such professionals require a sound understanding of organizational principles and practices so that they can serve as an effective bridge between the technical and management communities within an organization, enabling them to work in harmony to ensure that the organization has the information and the systems it needs to support its operations. Information systems professionals are also involved in designing technology-based organizational communication and collaboration systems.

1. Program General Aims

After successful completion of the information systems program, graduates should be able to:

- O1. Develop the ability to recognize problems that are amenable to computer information systems, and knowledge of the tools necessary for solving such problems.
- O2. Understand fundamentals of systems development life cycle (SDLC), information networks, information security, data mining, e-commerce, geographical information systems, and crisis management.
- O3. Manage and exploit organizational data and information; designing data and information models, Managing information systems development resources and projects
- O4. Implement solutions, including use of appropriate programming languages, web-based systems and tools, design methodologies, and database systems.
- O5. Apply the principles of effective information management, information organization, information mining, and information-retrieval skills to information of various kinds, including text, images, sound, and video.
- O6. Identify fundamentals of intelligent information systems technologies.

- O7. Specify, design, and implement computer-based information systems, and evaluate them in terms of general quality attributes and possible tradeoffs presented within the given problem.
- O8. Apply IS solutions to functional, inter-organizational, operational, managerial, and executive problems and opportunities.
- O9. Describe characteristics of various components of information systems, use the appropriate tools and techniques to analyze, design, and construct information systems.
- O10. Communicate effectively by oral, written and visual means.
- O11. Work effectively as an individual and as a member of a team.
- O12. Perform independent and efficient time management.
- O13. Demonstrate awareness of key ethical issues affecting information systems and their responsibilities as information science professionals.

The responsibility of achieving these objectives is carried out by information systems faculty and staff with the required experience.

2. Intended Learning outcomes (ILOs)

a. Knowledge and Understanding

The graduates of the information systems program should be able to demonstrate knowledge and understanding of:

- K1. Essential facts, concepts, principles and theories relating to computing and information and computer applications as appropriate to the program of study.
- K2. Modeling and design of computer-based systems bearing in mind the tradeoffs.
- K3. Tools, practices and methodologies used in the specification, design, implementation and evaluation of computer software systems.
- K4. Criteria and specifications appropriate to specific problems, and plan strategies for their solution.
- K5. The extent to which a computer-based system meets the criteria defined for its current use and future development.
- K6. The current and underlying technologies that support computer processing and inter-computer communication.
- K7. Principals of generating tests which investigate the functionality of computer programs and computer systems and evaluating their results.
- K8. Management and economics principles relevant to computing and information disciplines.

- K9. Professional, moral and ethical issues involved in the exploitation of computer technology and be guided by the appropriate professional, ethical and legal practices relevant to the computing and information industry.
- K10. Current developments in computing and information research.
- K11. Requirements, practical constraints and computer-based systems.
- K12. A core of analysis, algebra, applied mathematics and statistics.
- K13. Information systems, data and information management, enterprise architecture, IS project management, IT infrastructure, systems analysis and design, and IS strategies.
- K14. The principles and techniques of database management systems, management, data mining, geographical information systems, multimedia, application development, business process management, enterprise systems, human-computer interaction, object-oriented analysis and design, etechnologies, multimedia, image processing, information and infrastructures security and computer graphics techniques.
- K15. The broad context within which computer information science including issues such as quality, reliability, enterprise, employment law, accounting and health.
- K16. Organizational, human and economic sides of modern organizations.
- K17. The principles of Information communication and information security.
- K18. Specification, analysis, design, implementation and testing of IS solutions.
- K19. Modeling organizational processes and data, defining and implementing technical and process solutions, managing projects, and integrating systems.
- K20. Types and alternatives of global information systems architectures, and their differences in terms of service and cost consequences, and their implications for the organizational support needed.

b. Intellectual Skills

The graduates of the information systems program should be able to:

- I1. Analyze computing problems and provide solutions related to the design and construction of computing systems.
- I2. Realize the concepts, principles, theories and practices behind computing and information as an academic discipline.
- I3. Identify criteria to measure and interpret the appropriateness of a computer system for its current deployment and future evolution.
- I4. Analyze, propose and evaluate alternative computer systems and processes taking into account limitations, and quality constraints.
- 15. Make ideas, proposals and designs using rational and reasoned arguments for presentation of computing systems.

- I6. Evaluate the results of tests to investigate the functionality of computer systems.
- I7. Achieve judgments considering balanced costs, benefits, safety, quality, reliability, and environmental impact.
- I8. Be familiar with the professional, legal, moral and ethical issues relevant to the computing industry.
- I9. Evaluate research papers in a range of knowledge areas.
- I10. Define traditional and nontraditional information systems problems, set goals towards solving them, and. observe results
- II1. Perform comparisons between (methods, techniques...etc).
- I12. Identify attributes, components, relationships, patterns, main ideas, and errors.
- I13. Restrict solution methodologies upon their results.
- I14. Select the suitable tools, methods and techniques for modeling, analyzing IS, establishing criteria, and verify solutions.
- II5. Identify a range of solutions and critically evaluate and justify proposed design solutions.
- I16. Solve IS problems with pressing commercial, time, and industrial constraints.
- II7. Suggest an innovative design to solve a problem containing a range of commercial and industrial constraints.
- 118. Perform problem analysis from written descriptions; derive requirements specifications from an understanding of problems (analysis, synthesis).

c. Practical and Professional Skills

The graduates of the information systems program should be able to:

- P1. Operate computing equipment, recognizing its logical and physical properties, capabilities and limitations.
- P2. Implement comprehensive computing knowledge and skills in projects and in deployment of computers to solve position practical problems.
- P3. Deploy the equipment and tools used for the construction, maintenance and documentation of computer applications.
- P4. Apply computing information retrieval skills in computing community environment and industry.
- P5. Develop a range of fundamental research skills, through the use of online resources, technical repositories and library-based material
- P6. Design, implement, maintain, and manage software systems.
- P7. Assess the implications, risks or safety aspects involved in the operation of computing equipment within a specific context.
- P8. Handle a mass diverse data, assess risk and draw conclusions.

- P9. Use appropriate programming languages, web-based systems and tools, design methodologies, and database systems.
- P10. Use quantitative analysis techniques appropriately and effectively.
- P11. Justify technological, methodological and management choices for an information system project for a given organization.
- P12. Plan and manage an information systems project from inception to final implementation and cut-over
- P13. Produce acceptable technical reports and user system documentation.
- P14. Perform information acquisition and management, using the scientific literature and Web sources.
- P15. Apply the principles of effective information acquisition, information management, organization, and information-retrieval to text, images, sound, and video.
- P16. Apply the principles of human-computer interaction to the evaluation and construction of a wide range of materials including user interfaces, web pages, and multimedia systems.
- P17. Use tools to automate IS development phases.
- P18. Analyze and document the feasibility of various options and comparing solution options using multiple decision criteria
- P19. Maintain existing information systems.

d. General and Transferable Skills

The graduates of the information systems program should be able to:

- G1. Demonstrate the ability to make use of a range of learning resources and to manage one's own learning.
- G2. Demonstrate skills in group working, team management, time management and organizational skills.
- G3. Show the use of information-retrieval.
- G4. Use an appropriate mix of tools and aids in preparing and presenting reports for a range of audiences, including management, technical, users, industry or the academic community.
- G5. Exhibit appropriate numeracy skills in understanding and presenting cases involving a quantitative dimension.
- G6. Reveal communication skills, public speaking and presentation skills, and delegation, writing skills, oral delivery, and effectively using various media for a variety of audiences.
- G7. Show the use of general computing facilities.
- G8. Demonstrate an appreciation of the need to continue professional development in recognition of the requirement for life-long learning.

3. Program Academic Standards

- **1-** National Academic Reference Standards (NARS) for Computing and Information, October 2010.
- **2-** Standards of Higher Supreme Education Council for the Egyptian Universities.
- 3- Standards of ACM/IEEE CS curricula 2013 (Ironman report).

4. Reference indices (Benchmarks)

- 1. Handbook for Academic Review (QAA 2000): Users Guide to the Academic Review of Subjects in Higher Education Institutions in the Transitional Period, 2002-2005.
- 2. Handbook of Institutional Audit, England, 2002.
- 3. Collaborative Provision Audit: Supplement to the Handbook for Institutional Audit: England, December, 2004.
- 4. Nick Harris, Quality Assurance and Accreditation, Report of Visit, March 2008, U.K.

5. Curriculum structure and contents of program

5.A Program duration: 8 semesters.

5.B Program structure:

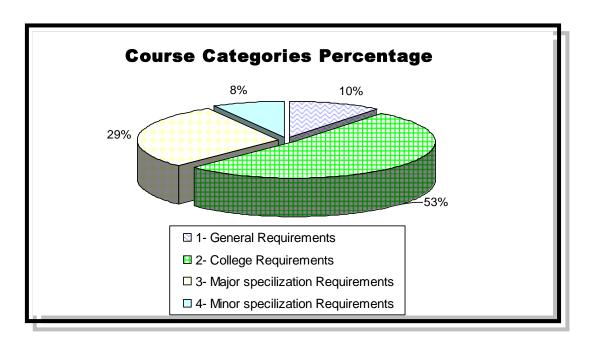

Total Credits: 144 credit hours

Mandatory Credits: 117 credit hours

Elective Credits: 27 Credit hours

1- General Requirements (Humanities):

- 15 credit hours. (10%)
 - 12 mandatory credit hours.
 - 3 elective credit hours.
- 2- College Requirements:
 - 75 mandatory credit hours. (53%)
- 3- Major specialization Requirements: (29%)
 - 30 mandatory credit hours.
 - 12 elective credit hours from the list of major elective courses.
- 4- Minor specialization Requirements: (8%)
 - 12 elective credit hours from the lists of minor elective courses.
- 5- Professional Training:
 - 4 courses in one of the available tracks and their courses are not counted towards the credit requirements.

5.C Program levels (in credit-hours system):

Level 1/Year 1: Required to pass 12 courses (distributed as follows):

Compulsory 12 courses Elective 0 Optional 0

Level 1/Year 2: Required to pass 12 courses (distributed as follows):

Compulsory 12 courses Elective 0 Optional 0

Level 1/Year 3: Required to pass 12 courses (distributed as follows):

Compulsory 8 courses Elective 4 courses Optional 0

Level 1/Year 4: Required to pass 12 courses (distributed as follows):

Compulsory 8 courses Elective 4 courses Optional 0

	Total	100%	100

6. Contents of Courses

Course Code: LH135

Course Title: ENGLISH FOR SPECIAL PURPOSES I

Course Content:

• Gain a sufficient stock of computing and IT vocabulary

- Read technical texts effectively and apply essential reading skills
- Employ different language functions and grammatical structures
- Use technical terms in producing varied writing tasks
- Listen to interviews, discussions and lectures on computing and IT topics for gist and specific

information and also take down notes

- Write coherent and well-developed paragraphs
- Engage in discussions and different speaking activities

Course Code: LH136

Course Title: ENGLISH FOR SPECIAL PURPOSES-II

Course Content:

- Increase their stock of essential computing and IT vocabulary.
- Read authentic technical texts effectively and apply essential reading skills.
- Employ different Language functions and grammatical structures.
- Use technical terms to produce varied tasks.
- Listen to interviews, discussion and lectures on computing and IT topics for gist and specific information and also take down notes.
- Write coherent and well-developed essays.
- Engage in discussions and different speaking activities.

Course Code: NC233

Course Title: Communication Skills

Course Content:

- Package their skills in a job-getting interview and team work communication
- Identify and focus on the main message and content
- Organize speaking and writing in a logical, professional-looking fashion
- Evaluate information resources
- Avoid plagiarism by adhering to correct referencing principles
- Think critically
- Speak confidently and authoritatively, with or without, speech notes
- Communicate through public presentations

Course Code: BA101 Course Title: Calculus I

Course Content:

- Differentiate certain types of functions (trigonometric functions and their inverse, exponential function, and logarithmic function).
- Understand and use the applications of differentiation (l'Hopital, Taylor and Maclaurin's expansions).

Course Code: BA102 Course Title: Calculus II

Course Content:

- Integrate different types of functions using various methods (Integrating by substitution, integration by parts).
- Understand and use the applications of integration (Area & volume, average of a function, length of a curve).
- Solve system of linear equations using Matrices, and determinants.

Course Code: BA201
Course Title: Calculus III

Course Content:

- Use the Laplace transform and the theorems (first shift theorem, transform of differentiation and integration theorems, etc....) in solving differential and integral equations.
- Understand the Fourier analysis which includes the Fourier series and Fourier transform.
- Know the concept of linear programming in order to solve system of linear inequalities using the simplex method.

Course Code: BA203

Course Title: Probability and Statistics

Course Content:

- Make statistical analysis and calculating statistical measurements using computer programs like the Minitab program or Excel.
- Introduce the basic ideas of probability and conditional probability and its dependence.
- Introduce discrete and continues random variable.
- Study simple application to reliability and life testing.

Course Code: BA204

Course Title: Linear Algebra

Course Content:

- Learn the basic theory of linear algebra through Eigenvalues.
- Realize the wide applicability of linear algebra by examining applications.
- Learn some useful algorithms for linear systems

Course Code: BA113
Course Title: Physics

Course Content:

- UnderStand the basic rules of **electrostatics** (Conductor and insulator) and Coulumb's law.
- Capacitors (Parallel plate capacitor, energy stored), and capacitors with dielectric between its plates.
- Electric currents in DC circuits, and RC circuits.
- Magnetism (force in a charge and current carrying conductor), generation of magnetic fields, electro-magnetic induction, magnetic flux, faraday's law. Lenz's law, and mutual induction-self induction.
- Physical optic (huygen's principle of light-interference). Interference-thin films-Newton's rings.

Course Code: EC134

Course Title: Fundamentals of Electricity and Electronics

Course Content:

- Understand the basic principles of Electricity and electronics
- Identify the electrical and electronic components and circuits.
- Understand the operation and uses of amplifiers and oscillators.
- Carry out simple electronic projects.

Course Code: AR115

Course Title: Visual Studies

Course Content:

- Demonstrate understanding of the elements of interface visual design.
- Use graphic vocabulary.
- Apply colour theories and principles of shapes in web designs.
- Use computer design compositions.

Course Code: CS111

Course Title: Introduction to Computers

Course Content:

- Introducing Computational thinking
- Identifying the hardware and software components of a computer
- Introducing data types and understanding data internal representations
- Use a programming language to implement, test, and debug algorithms for
- solving simple problems.
- Introduce Modular programming
- Introducing the Internet and World Wide Web (if time allows)

Course Code: CE216

Course Title: Digital Logic Design

Course Content:

- Know the basic differences between analog and digital systems
- Use binary numbers and codes
- Describe the operation of logic gates
- Apply Boolean Algebra on K-map
- Describing circuit operations using state diagrams
- Design a combinational and sequential logic circuits to simplify function

Course Title: Computer Architecture

Course Content:

- Present the various digital components used in the organization and design of digital computers.
- Explain the detailed steps that a designer must go through in order to design an elementary basic computer.
- Introduce the organization and architecture of the main units of a digital computer

Course Code: CS143

Course Title: Introduction to Problem Solving and Programming

Course Content:

- · Apply problem solving techniques.
- Discuss data types, file types, constants and variables.
- Use the various mathematical, logical and relational operators.
- Construct statements (assignments, expressions and functions).
- Perform program design techniques (flowcharts and pseudo-code).
- Use programming constructs (repetition, selection and sequencing)
- Discuss data structures (arrays and linked lists).
- Design, write, run and debug introductory programs using the currently adopted programming language.

Course Code: CS243

Course Title: Object-Oriented Programming

Course Content:

- Differentiate between the different editions of Java Language.
- Understand object oriented design principles.
- Understand the basic components of object oriented programming such as inheritance, abstraction, interfaces, inner classes and encapsulation.
- Understand the class members and access modifiers.
- Apply methods overloading and overriding.
- Handle runtime exceptions.
- Using Java API (java.lang, collection framework, ... etc.)
- Build user interfaces using Java swing package, and event driven programming.
- Understand object oriented relations (associations, aggregation, composition, inheritance and interface, etc).
- Create simple software system using Java.

Course Title: Advanced Programming Applications

Course Content:

- Build advanced user interfaces using Java swing package.
- Communicate with a DBMS using JDBC.
- Understand multi-threaded programming.
- Discuss distributed computing using RMI
- Understand the basics of Java web programming, such as servlets, JSPs.
- Understand Unix/Linux code development tools
- Understand scripting languages
- Work in teams and effectively communicate ideas and outcomes

Course Code: CS345

Course Title: Structure of Programming Languages

Course Content:

- Be familiar with several language paradigms and how they relate to different application domains.
- Understand the design space of programming languages, including concepts and constructs from past languages as well as those that may be used in the future.
- Understanding of the programming language we use by being able to identify and compare the same concept as it appears in different languages.
- Evaluating of programming models to provide a range of possible solutions and the ability to select the most optimized and relevant to the problem in hand.
- Understand the concepts and theory behind the implementation of high level programming languages
- Know significant details about a number of important techniques commonly used in compilers construction.

Course Code: CS433

Course Title: Web Programming

Course Content:

- Write HTML files without using web generation tools.
- Specify the difference between client-side and server-side web programming.
- Master the basic syntax of JavaScript as a client-side scripting language.
- perceptual, dynamic and interaction aspects of virtual environments.
- Develop dynamic web pages using JavaScript
- Describe how server-side scripts work
- Install and administer an Apache Web Server in a UNIX environment.
- Understand what open-source software is.
- Understand what a server-side HTML-embedded scripting language is.
- Know the syntax of PHP.
- Use PHP to develop dynamic web sites
- Access a MySQL Database from a PHP script.

Course Title: Data Structures and Algorithms

Course Content:

- Revise concepts of Arrays, Structs, and Pointers
- Understand the concept of Linked List
- Understand & use Stacks
- Understand and implement Queues
- Understand the concept of Hashing
- Trees (BST, AVL trees, Heaps,..)
- · Graphs implementation and processing
- Searching and Sorting techniques

Course Code: CS311

Course Title: Theory of Computation

Course Content:

- Understand the capabilities and limitation of computational models
- Prove whether or not a given language is regular.
- Prove whether or not a given language is context-free.
- Design variants of Turing machines
- Understand the relationship between the regular, context-free and recursively enumera languages.

Course Code: CS202

Course Title: Discrete Structures

Course Content:

- Use logic to determine the validity of an argument.
- Construct the proof of a theorem.
- Understand the terminology, operations, and symbols of set theory.
- Use combinatorial techniques when needed in solving problems.
- Identify a function; specifically, surjective, injective, and bijective functions.
- Identify a relation; specifically, a partial order, equivalence relation, or total order.

Course Code: CS301

Course Title: Numerical Methods

Course Content:

- Help student to work with symbolic representation as if they
- were concrete objects.(logical symbols)
- Help student to think abstractly and to avoid logical errors.
- Help student to reason from definitions.
- Help student to use both direct and indirect argument to derive new results.
- Help student to think recursively by assuming similar problems of smaller nature that have been already solved and figuring out how to the larger problem.
- Help student to deal with discrete structures, categorizing and revealing the
- underlying relations among them .(e.g. number theory, functions, relations, finite state automata)
- Help student to study the measurements of laws concerning combinations, probability.

- Help student to design an algorithm and determine whether it is correct or not (Mathematical induction)
- Show the students the extraordinary practical utility of some mathematical ideas.

Course Title: Database systems

Course Content:

• Explain database design concepts.

- Design a database system for a real-world problem.
- Implement and verify a database system using ORACLE.

Course Code: IS474

Course Title: Advanced Database Systems

Course Content:

- Explain the concepts for modeling, designing, querying and managing large databases.
- Experiment with the modeling and design of distributed databases, data warehousing, web databases, XML databases, and mobile databases.

Course Code: CE231

Course Title: Introduction to Networks

Course Content:

- Understanding the motivation that derived the research work in computer networks and overviewing the different contributions, and early research efforts that shaped the evolution of the Internet e research work in computer networks and overviewing the different contributions, and early research efforts that shaped the evolution of the Internet
- Introducing link multiplexing techniques (TDM, FDM, Statistical Multiplexing)
- Understanding the different Network Service Models (Packet switching vs Circuit switching)
- Introducing network delays and their effect on the network performance
- Understanding Network layer services and differentiating between the network core and edge
- Understanding routing and forwarding in the light of the two main classes of routing algorithms used over the Internet; Link State and Distance Vector routing protocols
- Introducing the Internet Protocol (IP), IP subnetting and Internet Control Message protocol (ICMP)
- Understanding the ISP tier structure and hierarchical addressing
- Understanding and differentiating between Flow control and congestion control and studying their implementation in the TCP/IP stack

Course Title: Systems Programming

Course Content:

- Build the architecture of a hypothetical machine, its assembly language, macro language.
- Program in assembly language.
- Build the structure and design of assemblers, linkers and loaders.
- Understand the concepts and theory behind the implementation of highlevel programming languages through building a compiler/interpreter for a simple high-level language.

Course Code: CS322

Course Title: Operating Systems

Course Content:

- Operating Systems overview
- Process Description & Control
- Threads
- Concurrency
- Deadlocks
- Memory Management
- Virtual Memory Management
- Uniprocessor, multiprocessor, and Real-time scheduling
- I/O management and Disk scheduling

Course Code: CS366

Course Title: Introduction to Artificial Intelligence

Course Content:

- Understand the basic concepts of symbolic artificial intelligence.
- Understand different Methods for knowledge representation: state space, production rules, logic, etc..., and associated algorithms: search, forward/ backward inference algorithms, resolution, etc...
- Implement a variety of intelligent applications using C, Prolog, and shells.
- Use machine learning as a new paradigm for building intelligent systems.

Course Code: IS461

Course Title: Decision Support Systems

Course Content:

- Understand the concepts of decision support systems structure and the principles of their design.
- Analyze typical decision situations to determine whether it is practical to support them with computer technology and, if so, how.
- Design and implement a decision support system.
- Understand emerging technologies and issues in the context of decision support systems as well as the management of information technology.
- Understand decision support, expert, and group decision support system use, development, and evolution

Course Title: Computer Graphics

Course Content:

- Fundamental Concepts: analogue signals to discrete samples, raster vs. vector, pixels, GUI APIs, image compression, color, graphics primitives, flicker-fusion, animation
- Rendering Techniques: graphics pipeline, modeling, 2D graphics, 3D graphics, transformation, texture mapping, sampling, and ant aliasing
- Geometric Modeling: implicit and parametric forms, fractal images, transformation, Clipping
- Visualization: Apply Lighting & Texture mapping, behavior and interaction techniques,
- Recognize a variety of applications of visualization including representations of scientific, medical, and mathematical data; flow visualization; and spatial analysis.
- Animation: Use Alpha GV, timing, Implement interpolation methods for producing in-between positions and orientations, morphing techniques, LOD,
- Billboard
- PDC: Understand GPU architecture and apply simple GPU rendering CUDA code
- Project: Develop a computer graphics project to apply course concepts.

Course Code: CS451

Course Title: Human Computer Interaction

Course Content:

- Apply a variety of interaction design processes and techniques and know when they are appropriate
- Examine an interactive product and explain what is good and bad about it in terms of the concepts, goals, and principles of interaction design
- Apply usability evaluation methods and know when they are appropriate
- Understand the role of social dynamics in interaction and how it applies in design, including concerns such as privacy, power, and accessibility
- Understand cognitive factors that affect usability
- Judge the availability and feasibility of different devices for interacting

Course Code: IS421

Course Title: Computer System Security

Course Content:

- Identify threats to computer systems
- Outline security attacks and countermeasures
- Master classical and modern encryption techniques
- Experiment with authentication protocols
- Outline application layer security (E-mail and Web Security)
- Experiment with system security (Firewalls and Intrusion Detection)
- Outline main components of a security policy

Course Title: System Modeling & Simulation

Course Content:

- Understand the basic principles of the field of Modeling and Simulation.
- Master the modeling and performance evaluation of queuing systems using Markov chains.
- Explore simulation definitions, history, background and languages.
- Highlight the different stages in building a discrete event simulation model and the architecture of simulation software.
- Study some applications as computer architecture, operating systems, and network for performance analysis.

Course Code: IS171

Course Title: Introduction to Information systems

Course Content:

- Identify and explain the different types of Information Systems.
- Appreciate the value of information systems in modern business management and operations.
- Identify and describe different types of SDLC methodologies.
- State the difference between the logical and physical design of a system.
- Define the term organization and identify its components.
- Define data management concepts and terms.
- Analyse and design a solution for a "real-world" Computer Business Information System.
- Discuss the ethical issues involved in developing and interacting with Information Systems.

Course Code: IS372

Course Title: Information Systems Theory & Practice

Course Content:

- Understand the role of information system in modern business and the competitive advantage they can deliver for a company
- Evaluate critically those current methods and techniques used to develop business and information strategies
- Secure and evaluate key aspects of IS/IT provision
- Understand the web impact in most business aspects and required web-based technologies
- Analysis of business and their processes to recognize where the application of information systems and other IT systems can improve the efficiency of those processes
- Organizing and implementing MIS
- Project Management for Information Systems
- Analysis of complex systems
- Group working methods
- Impact of change on stable systems

Course Title: Systems Analysis & Design

Course Content:

- Build a solid understanding of the information systems design and implementation phases of systems development life cycle (SDLC).
- Introduce several tools and techniques used in information systems design.
- Emphasize the use of systematic and structured methodologies in the design and implementation phases of SDLC

Course Code: IS371

Course Title: E, business Fundamentals

Course Content:

- Understand the difference between e-Business and e-Commerce,
- Understand the models of e-Commerce
- Identify and implement the steps of building e-Commerce web site
- Recognize the e-commerce infrastructure
- Be familiar with the e-Payment Systems
- Understand the e-commerce Marketing concepts
- Understand the requirements and methods of e-Commerce secure transactions

Course Code: IS471

Course Title: Strategic Planning for IS

Course Content:

- Familiarization with certain relevant terminology
- How a strategy evolves?
- How an IS/IT strategy evolves?
- Steps taken to implement an IS/IT strategy
- Use of Value Chain Analysis
- Assessment of IS/IT investment
- Application Portfolio Analysis
- Resourcing & Management
- Understanding and differentiating between Flow control and congestion control and studying their implementation in the TCP/IP stack

Course Code: IS477

Course Title: Geographic Information Systems

Course Content:

- Understand basic concepts of spatial analysis and GIS data management
- Skillfully utilize ArcGIS software as one of the most common GIS programs
- Solve a real world problems using GIS technology

Course Title: Integrated Information Systems Management

Course Content:

- Business Functions and Business Processes .
- Development of ERP Systems .
- Marketing Information Systems and the Sales Order Process.
- Production and Supply Chain Management Information Systems .
- Accounting in ERP Systems.
- Human Resources Processes with ERP.
- Process Modelling, Process Improvement and ERP Implementation .
- RFID, Business Intelligence, Mobile Computing and the Cloud .

Course Code: IS472
Course Title: E-Learning

Course Content:

- Understand how e-learning is different from traditional methods.
- Understand the main traditional learning skills on which e-learning skills are built upon.
- Know information and communication technology skills particularly relevant to elearning
- Understand e-learning environments and approaches.
- Understand the nature of e-learning skills
- Practice to develop main e-learning skills.
- Know the nature of communication technologies that help learners take part in elearning courses.
- Understand the nature of working and learning with others in collaborative learning

Course Code: IS479

Course Title: Digital Libraries

Course Content:

- Understand what a digital library is.
- Discuss history of digital library development briefly
- Discuss various DL protocols and techniques.
- Discuss DL tools and approaches .
- Compare various DLs.
- Develop a DL with a suite of common tools and emerging standards.

Course Code: IS433

Course Title: Mobile Computing Applications

Course Content:

- Identify the design patterns involved in multi-tier distributed applications.
- Develop basic mobile applications and incorporate enhanced GUI and VUI.
- Create efficient, event-driven user GUI and VUI interfaces
- Be able to create applications that use network-based information.
- Understand basic security requirements when developing mobile applications.

Course Title: Introduction to Software Engineering

Course Content:

• Know the software life cycle.

- Understand how to analyse, design, implement and test large-scale software.
- Practice teamwork in developing software project.
- Introduce techniques and standard documents used in each stage of the software life cycle.
- Work within a standard development process.
- Document process and product measurements.
- Utilize personal design and code reviews effectively.
- Analyze process data and propose improvements.

Course Code: SE391

Course Title: Project Management

Course Content:

- Plan, analyze, develop, test, and implement an information system, emphasizing the phases most needed for the particular project
- Work closely with the sponsors and users of the information system
- Prepare a project notebook and web site to document all work on the project.
- Develop skills in using more software tools such as Microsoft Project , the Web, etc.
- Prepare a personal portfolio demonstrating his/her ability to work in the IT field
- Develop technical writing, teamwork, and presentation skills .

Course Code: SE392

Course Title: Software Requirements & Specifications

Course Content:

- Revise software development cycle
- Analyzing the problem
- Understanding user and stakeholder needs
- Defining the system
- Constructing structural modal (Class diagram)
- Constructing dynamic model (Use-cases and sequence diagram)
- Requirement validation and checking
- From Use Cases to implementation
- Tracing requirements
- Agile requirements methods

Course Title: Principle of Software Architecture

Course Content:

- Understand principles of software architecture and their application to the software development process
- Understand and be able to apply a variety of architectural styles
- Review and evaluate software architectures
- Specify a software architecture and implement a software system embodying
 it
- Use computer-aided software engineering (CASE) tools in an architecturedriven design process
- Work effectively as a member of a small team
- Communicate architecture and design issues in an oral presentation

Course Code: SE491

Course Title: Software Component Design

Course Content:

- Understand and apply object-oriented design patterns
- Understand the use of UML in the design process
- Design and implement small SW components
- Use computer-aided SW engineering (CASE) tools
- Perform independent research on software design
- Communicate SW design concepts in a brief oral presentation

Course Code: SE492

Course Title: Software Verification

Course Content:

- Differentiate between the different s/w testing
- Understand s/w Validation and verification concepts.
- Understand different types of s/w testing.
- Understand the automatic of static analysis of s/w.
- Understanding of Testing Management Activities

Course Code: NC272

Course Title: Fundamentals of Business

Course Content:

- Conduct business in the global economy.
- Start and Expand a small business
- Manage a business, information systems, and production
- Manage employees.
- Develop marketing strategies to satisfy customers.
- Manage accounting and financial resources.

Course Title: Principles of Marketing

Course Content:

- Apply marketing theory and concepts toward solving managerial marketing problems.
- Analyze in written and oral presentation form, basic marketing principles related to specific business situations (perform critical thinking).)
- Understand and identify marketing opportunities, and how marketing concepts and tools can be applied to achieve organizational objectives.
- Appreciate the role of marketing executives within a complex matrix of business and society issues

Course Code: NC264

Course Title: Principle of Microeconomics

Course Content:

- Demonstrate an understanding, usage and application of basic economic principles
- Describe and apply the methods for analyzing consumer behavior through demand and supply, elasticity and marginal utility
- Understand the role of alternative property rights in resource allocation
- Identify and appraise various models of how markets are organized, and the price and output decisions for maximizing profit
- Know how markets that fail to use resources efficiently create unintended effects
- Strengthen problem solving skills by applying economic criteria to business decisions, international trade and public policy

Course Code: NC273

Course Title: Global Business

Course Content:

- an introduction to global business affecting IT and software development.
- Topics of interest include globalization and the international business environment, differences between countries and their cultures, virtual global organisations, international product life cycle, international strategic management, international logistics management, quality and process management, project management and international human resources management.

Course Code: NC282

Course Title: Financial Accounting

Course Content:

- Understand the underlying concepts of accounting including the accounting cycle, accrual accounting, accounting for current assets, fixed assets and current liabilities.
- Understand the accounting process and prepare the financial statements for a small business
- Be knowledgeable users of financial statements.
- Have an introductory-level understanding of computerized accounting systems and how to use those systems.

Course Title: Organizational Behavior

Course Content:

• Have a better knowledge of some of the factors that impact organizational effectiveness.

- Describe the philosophy and theories of organizational behavior.
- Understand the concept of perception inside work setting.
- Understand the learning theories on people behavior.
- Describe the motivation theories and their impact on employees' behavior.

Course Code: CS481

Course Title: Computers & Society

Course Content:

- Understand the ethical, social, legal, and professional issues surrounding the emerging information technologies.
- Sharpen his skill in moral reasoning, imagination, and behavior.
- Develop a coherent set of positions on the issues in this course, and a plan for implementing them in his professional life.

7. Program admission requirements

The students are admitted to CCIT on the basis of their general secondary school certificate record (or equivalent).

Applicants must not be more than 22 years of age at the time of enrolment. A student must be in sound health and free from diseases, and a recent medical report to this effect should be presented.

Applicants should satify the conditions and scores stated by the Supreme Council of Egyptian Universities, these are:

- 1- High school certificates "Thanaweya Amma" Mathematics Section.
- 2- High school certificates "Thanaweya Amma" Science Section, with additional preparatory courses to cover mathematics background needed for studying in CCIT. (These courses will be considered as zero credit).
- 3- IGCSE, American Diploma, or equivalent diplomas from any other country

Transfer applications from accredited universities and academies are also accepted by the Academy.

The Academy considers readmission applicants for students who were unable to continue their studies for one semester or more in light of their studies before their withdrawal

8. Regulations for progression and program completion:

According to study program at the college, all CCIT students study the same courses in the first four semesters after which they declare one of the three majors for the next four semesters.

In order to complete the program of all departments and acquire a Bachelor's degree in it, the student must successfully achieve 144 credit hours in four years at least.

Regular attendance in all classes is required. Students are expected to arrive on time and remain in class for the entire period scheduled. The responsibility for work missed due to any type of absence rests with the student. Attendance is mandatory

Students are expected to attend every class session. Each instructor will maintain current records and will, upon request, furnish an accurate report of any student's attendance pattern to the Registration Office. Attendance is checked from the first class meeting; therefore, late registrants will have some absences when they first meet a class.

When students are absent, for any reason, they are still responsible for the content of the missed lecture and for any assignments. If the absence causes the student to miss a major examination: that examination may be made up if the instructor is convinced that the absence was justified. A student's attendance record is a legitimate part of the criteria, which the instructor may use in assigning a grade for the courses. It is the responsibility of students to be aware of the attendance policies for their classes.

After the student has missed over 15% of class, the student will be asked to withdraw from the course and a grade of "W" will be entered. In case of illness or other forcing circumstances, absence may reach 20% without forcing withdrawal.

Students withdrawing from study during a semester must fill out a withdrawal permit; have it properly executed by the Registrar in order to leave a clear record. A student completing this process before the beginning of the final examination period will have a "W" record on the permanent record.

A student who withdraws without following this required procedure will be awarded an "F". Students cannot officially withdraw from study after the last day of classes prior to final examinations or while under disciplinary investigation.

Students are personally responsible for completing all requirements established for their degree by the College / Department. It is the student's responsibility to know the requirements for the appropriate degree program.

Faculty advisors will assist students in preparing schedules, completing degree plans, and generally will counsel students on academic matters, but advisors may not assume responsibility for the student's academic progress and ultimate success or failure in a given program of study.

Any substitution, waiver, or exemption for any established requirement or academic standard may be accomplished only with the approval of the department Head and the College Dean.

Constant follow ups are done for students with special needs after each assessment to evaluate their academic level of achievement. The academic advisor of each student is in charge of solving any problems that she/he may encounter.

Graduation Requirements

To be qualified for Bachelor of Science the candidate must:

- Complete 144 credit hours of approved work
- Earn a cumulative grade point average of at least 2.00
- Complete practical training

9. Evaluation of Program ILOs

Method	Evaluated ILOS
Written exams including short Quizzes	Knowledge and understanding
Oral Exams including those taken during laboratory hours	Knowledge and understanding
Assignments and course term work	Intellectual Skills
Mini projects (single student or team work)	Professional, Practical Skills, General and Transferable Skills
Practical Work	Professional, Practical Skills, General and Transferable Skills
Graduation Projects (team work)	Professional, Practical Skills, General and Transferable Skills

10. Methods of Program evaluation:

	Evaluator	Method
1	Students	Questionnaires, surveys, checklists
2	Alumni	Questionnaires, surveys, checklists
3	Employers	Individual interviews, Questionnaires, Meetings
4	External auditors and Examiners	Documentation review, Observation
5	Instructors	Focus groups, Course surveys, Meetings

Head of Department

Name: Dr. Mohamed Bakr AbdelHalim
