**College of Engineering and Technology**  
**Architectural Engineering and Environmental Design Department**

---

**Dear Students**

Warm congratulations on the beginning of the new academic semester, Spring 2021.

In order to keep-up with social distancing, kindly be informed that this term's study is planned to follow a hybrid model, in which students will be allowed **in campus for three days ONLY** – without having in-campus / online classes in the same day.

For that registration starts this Sunday 21-02-2021 **@11:0am**, students are kindly requested to **commit strictly to CLASS PACKAGES**, as done in 'Term 1' registration.

Class packages [attached below] are designed to cover all core courses, and to allow reasonable choices of elective courses.

Should any student register courses from **different class packages**, the Department will regretfully **CANCEL** his/her **REGISTRATION** immediately, at the student's own responsibility.

Students who are not following the regular term plan [failed courses, transferred cases, etc.] must refer to their academic advisors before registration.

Students are also allowed to choose freely a different elective course from the package, therefore attached at the end of classes packages the list of elective courses that are matching with each class package.

Many thanks for your positive cooperation.

We wish you a happy, successful and safe semester.

All the Best;

**The Department of Architectural Engineering and Environmental Design, Cairo**

## Elective Courses Description – Spring 2021

Course Code	Course Name	Brief Description
AR221	<b>Scientific Thinking</b>	<p>This course is concerned with the nature of thinking, covering different types of thinking such as Scientific Thinking, Critical Thinking and Creative Thinking. Topics covered include: the elements of scientific thought, universal intellectual standards in scientific thinking, the traits of a scientific mind, challenges and generation of alternatives, creative problem solving techniques, linear and intuitive techniques; morphological analysis and operations.</p>
AR222	<b>Presentation Techniques</b>	<p>This course is based on advanced architectural presentation techniques, not only the observation of color, materials, relationship between, architectural, landscape, and interior elements and its environment, but it is extend to teach Students how to be able to Present their ideas through research, animated presentations or ....etc., defend his/her ideas; and communicate effectively by writing or verbal techniques.</p>
AR 223	<b>Architecture of Egypt: Time &amp; Place</b>	<p>This course introduces students to the architecture of Egypt, covering keystone buildings and sites ranging from antiquity to the 21st century. The course depends mainly on site excursions. Accompanied by lecturers throughout the course, students are encouraged to sketch, take photographs and have on-site arguments and discussions. The course also includes visits to museums and exhibitions, as well as a number of meetings with guest lecturers, conservation architects and design professionals. Finally a studio work is held on the light of the lessons learned throughout the trip.</p>
AR 224	<b>Workshops &amp; Architectural Models</b>	<p>Architectural Models are one of the main means by which an architect invents and develops his design. They serve as a bridge between the idea and its realization and are clear and comprehensible examples of how design ideas can be skillfully translated into models. Students learn how to build abstract and architectural forms using different materials such as wood, paper, plaster ....etc.</p>

AR 226	<b>Creativity &amp; Innovation</b>	This course presents an outlook to the process of creativity in design and to the innovative concepts influencing the process. It introduces the various theories and models of creative thinking increasing student's awareness of creativity and innovation. The course helps students develop their ability to develop inspirational concepts, explore different medias to discover solutions to problem solving tasks.
AR302	<b>Architectural Cinematography</b>	This interdisciplinary course bridges the arts of architecture and cinema by exploring the connections between them from the perspective of various disciplines. Both forms of art define the dimensions and essence of existential space; they both create experiential scenes of life situations. Through watching movies, reflective exercises, and guest speakers, undergraduates will explore the role of architecture as a narrative device, how architecture becomes a character in movie boosting a film's narrative, or employing the experiential elements of architecture to transport us to worlds that we can grasp only through architecture.
AR 322	<b>Int. to Arch. Photography</b>	This course explores the practical and creative interplay between photographic practice and theory in the field of visual representations of urban space. It aims to encourage an innovative approach to architectural and urban photography by adopting a critical approach to the way we perceive, relate and respond to the physical realm of architecture.
AR 324	<b>Introduction to Sculpture</b>	The course introduces the students to the fundamentals of art in three-dimensional form. Students learn relevant terminologies and are introduced to basics of shape, volume, light, texture, color and value. During the course, they are introduced to materials: clay, plaster, wood, stone, metal ...etc., techniques, tools and their selection, proper usage and finishing.

AR420	<b>Development approach in Urban Design</b>	<p>This course is an introductory course of development approaches in urban design.</p> <p>It concerns addressing this different approaches and methods with emphasizing on the basics and fundamentals of urban Spaces design, evaluation and redesign as well as the morphological analysis and environmental and social behavior and economic studies throughout the design process. It links the abstract political, social and economic factors with the identity physical environment and the entire city. It also explores the principles of proposed urban concept plan within an overall vision of the development approaches as well as the philosophy of urban designing.</p>
AR 423	<b>Topics in Sustainability</b>	<p>The course reviews concepts and theories of sustainability and how the term has developed and embraced change and shift in policies and global commitment. Students are encouraged to think of developing principles and consider the design process with sustainable principles at the forefront. Innovative ideas and international examples are explored.</p>
AR425	<b>Int. to Environmental System</b>	<p>This course aims to enable the student to understand the various elements that affect human thermal comfort located in a certain building with the use of measurement tools &amp; simulation software.</p>
AR428	<b>Computer Application</b>	<p>This course introduces students to computer applications in architecture that go beyond drawing and design presentation. It explores how the information and technological revolution influences architecture and other related fields.</p>
AR499	<b>Social Dimensions in Urban Design</b>	<p>Urban sociology studies the way that cities shape social life, considering spatial context as fundamental to understanding the social world. Over the semester, this course will explore three essential components of the city: 1) its formation, 2) its geographical and physical structure and composition, and 3) social organization among its residents.</p>

<b>AR520</b>	<b>Urban Design in Practice</b>	This course addresses the collaborative and multi-disciplinary process of shaping the physical setting for life in cities, towns and villages. It highlights the art of making places, design in an urban context. . The course includes rich collection of ideas and projects that urban designers are generating internationally. It shows that urban design can improve the human experience from the most local project to the wider environment.
<b>AR521</b>	<b>Research &amp; programming</b>	This course is an introduction to the basic methods of research development and programming, with particular emphases on architecture and environmental design disciplines
<b>AR 522</b>	<b>Intro. Colors &amp; Light in Internal Spaces</b>	The course focuses on lighting design for interior spaces. Students gain knowledge of the perception and psychological aspects of light as well as technical information related to current fixture types and appropriate application.
<b>AR524</b>	<b>E.I.A. in Urban planning</b>	<p>In this course, students will:</p> <ul style="list-style-type: none"> <li>• Explore the importance of Environmental Impact Assessment (EIA) in environmental management;</li> <li>• Develop an introductory understanding of EIA processes and methodologies;</li> <li>• Apply techniques to implement EIA.</li> </ul>
